(54) Title: DNA VACCINES AGAINST TUMOR GROWTH AND METHODS OF USE THEREOF

A

C

B

D

(57) Abstract: A DNA vaccine suitable for eliciting an immune response against cancer cells comprises a polynucleotide construct operably encoding an a Fra-1 protein, such as a polyubiquitinated human Fra-1 protein, and IL-18, such as human IL-18, in a pharmaceutically acceptable carrier. In a preferred embodiment, the polynucleotide construct is operably incorporated in an attenuated bacterial vector, such as an attenuated *Salmonella typhimurium*, particularly a doubly attenuated *aroA*-*dam*-*S. typhimurium*. Transformed host cells, methods of inhibiting tumor growth, of vaccinating a patient against cancer, and of delivering genetic material to a mammalian cell in vivo are also described.
